WEST MIDLANDS INTERCHANGE

Transport Technical Note 31 – Shift Change Assessments

Job Title	West Midlands Interchange		Project Number	70001979
Client	Four Ashes Limited			
TTN No.	31 Revision A	Date of Issue	8 December 2017	
Subject	Shift Change Junction Assessments			
Author	Lewis Walton	Authorised	Neil Findlay / Ian Fielding	
Distribution				

1 INTRODUCTION

1.1 This Technical Note (TN) provides a summary of the effects of the shift changes on the proposed A449/Crateford Lane/Gravelly Way site access and the staggered priority junctions serving the Intermodal Terminal to the south of the A449/A5 Link Road and the proposed development plot to the north.

1.2 Using the Junctions8 assessment package, assessments have been performed of the

- The proposed four arm roundabout junction of the A449/Crateford Lane/ A449/A5 Link Road; and
- The proposed Intermodal Terminal Access staggered junction on the A449/A5 Link Road (east of the A449/Crateford Lane/Gravelly Way roundabout).

1.3 These assessments have been run at the time of shift change during the main part of the day, this being the end of the 0600-1400 shift and the start of the 1400-2200 shift. In order to capture the incoming and outgoing traffic at the change, assessments deal with the hours of 1300-1400 and 1400-1500.

1.4 The Highways England South Staffordshire VISSIM model has considered the operation of the highway network, including the above junctions during the AM and PM peak periods. This analysis has shown that the infrastructure proposed to serve WMI and the associated traffic can be accommodated and there would not be any severe impacts on the Strategic Road Network. However this VISSIM model does not extend to the afternoon shift change periods of WMI. Comments received from Highways England retained Engineering Consultants have requested details of the operation of the junction of the A449/A5 Link Road and the Intermodal Terminal Access at these times in order to demonstrate that traffic will not queue back to the A449.

1.5 This revised TN 31 deals with specific comments raised by Systra, as Spatial Planning Consultants to Highways England to the initial submission, where minor amendments to the modelling methodology were requested. These concerned the removal of HGV movements shown at Crateford Lane (east bound), the use of PCU factors of 2.5 to account for the forecast levels of articulated HGV movements and finally providing clarification that the left turn movement out of the northern development had been included.

2 SHIFT CHANGE ASSESSMENTS

2.1 In order to undertake this assessment, the future year 2021 flows with the additional development traffic have been used for both the shift changes.

2.2 The methodology considered background and development flows separately. All flows were factored from the modelled AM Peak period to the respective shift periods. Those factors can be found in **Table 2-1** below.

Shift Change Flow Factors From AM Peak (0800 - 0900)		1300-1400	1400-1500
Light Vehicles	Background	0.59	0.60
	Development	1.27	1.65
HGVs	Background	1.00	1.06
	Development	1.27	1.42

Table 2-1: Shift Change Flow Factors

WEST MIDLANDS INTERCHANGE

Transport Technical Note 31 – Shift Change Assessments

2.3 Background flow factors were based on surveyed flows over an average week from Survey Site 22 on the A449 South of Gailey Roundabout. Separate factors for HGVs and light vehicles were generated. These factors were applied to the 2021 background flows only. Development flow factors were based on the WMI Development Trip generation profile for an average weekday. Separate factors for HGVs and Light Vehicles were generated. These factors were applied to the 2021 Development flows only.

2.4 Scheme flows for the 2pm shift change were calculated as the sum of the 2021 factored background flows and the 2021 factored development flows.

2.5 Junctions8 models have then been prepared in order to undertake this assessment. As the shift changes will naturally have a peak occurrence, the ONE HOUR/ODTAB traffic profile has been used to provide an indicative peak.

2.6 The following details are appended to this TN:

- Annex 1 – Measurements used to identify geometric parameters of roundabout arrangements for inclusion in Junctions8 assessments
- Annex 2 – Details of traffic flow diagrams for the inter-peak shift changes
- Annex 3 – Junction8 Output files.

2.7 Reviewing the output files of the Junctions8 assessments considers the following values: -

- Ratio to Flow Capacity (RFC)
- Vehicle Queues
- Vehicle Delay (presented as Delay per Vehicle in seconds).

2.8 The output obtained indicates that all arms of the roundabout and staggered junction are shown to operate with RFC values within 0.850 during the inter-peak shift changes. No material queues are shown to occur;

2.9 **Tables 2-2 and 2-3** below show the results derived from the proposed roundabout and the staggered junctions respectively.

	Shift 1			Shift 2		
	RFC	Queue	Delay	RFC	Queue	Delay
A449/A5 Link Road	0.224	1	5	0.324	1	5
A449 South	0.500	1	4	0.490	1	3
Cratford Road	0.035	1	6	0.036	1	6
A449 North	0.377	1	3	0.399	1	3

Table 2-2 – Proposed A449 Roundabout Access

	Shift 1			Shift 2		
	RFC	Queue	Delay	RFC	Queue	Delay
A449/A5 Link Road (E)	0.187	1	11	0.093	1	11
Intermodal Terminal	0.258	1	27	0.361	1	29
A449/A5 Link Road (W)	0.074	1	8	0.171	1	13
Development Access	0.100	1	22	0.258	1	22

Table 2-3 – Proposed Internal Staggered Junction

2.10 It should be noted that the queue shown on the A449/A5 Link Road at the Intermodal Terminal staggered junction takes place in the ghost islands and therefore does not affect traffic on the mainline. With this accounted for, both junctions clearly operate well within capacity with limited queueing that does not extend back to the A449.

WEST MIDLANDS INTERCHANGE

Transport Technical Note 31 – Shift Change Assessments

2.11 There is a noticeable delay at the development plot access roads – this is likely due to the significantly higher level of traffic along the mainline rendering a gap harder to spot for any right-turners at the side roads. This is borne out by the delay incurred on the right-turning mainline traffic – the low vehicle number from the minor arm of the junctions, combined with a higher traffic movement on the mainline means that while a material queue does not build up, the vehicle that is waiting takes some time to make its manoeuvre. However it is considered that the level of delay shown is not material, particularly in the context of the RFC values obtained.

3 SUMMARY

3.1 This note has set out the results of the assessment of A449/Crateford Lane/ A449/A5 Link Road site access and the Intermodal Terminal Access staggered junction for the WMI scheme.

3.2 The assessment has been undertaken using the industry standard assessment tool Junctions8 as agreed with HE and their Consultants, Systra.

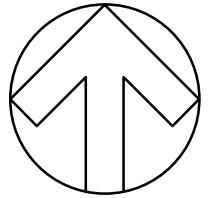

3.3 The assessment has dealt with comments raised by Systra in terms of the methodology adopted. Addressing these comments does not impact on the results of the assessments undertaken.

3.4 The results of the assessment indicate that during the shift change time periods, there will not be any issues with queueing back from the roundabout into the site that would interfere with the operation of the staggered Intermodal Terminal junctions. In addition, there would not be any issues with queues extending back from the staggered Intermodal Terminal access to the A449.

»Intermodal Terminal Staggered Junction - 2021 DS, Shift1

»Intermodal Terminal Staggered Junction - 2021 DS, Shift2

Summary of junction performance

	Shift1				Shift2			
	Queue (Veh)	Delay (s)	RFC	LOS	Queue (Veh)	Delay (s)	RFC	LOS
Intermodal Terminal Staggered Junction - 2021 DS								
Stream B-C	0.1	13.94	0.06	B	0.2	12.12	0.13	B
Stream B-AD	0.3	27.08	0.26	D	0.6	29.26	0.36	D
Stream A-BCD	0.2	11.36	0.19	B	0.1	11.12	0.09	B
Stream D-A	0.1	14.61	0.10	B	0.3	14.22	0.25	B
Stream D-BC	0.1	22.21	0.06	C	0.3	21.86	0.26	C
Stream C-ABD	0.1	8.39	0.07	A	0.2	12.74	0.17	B

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

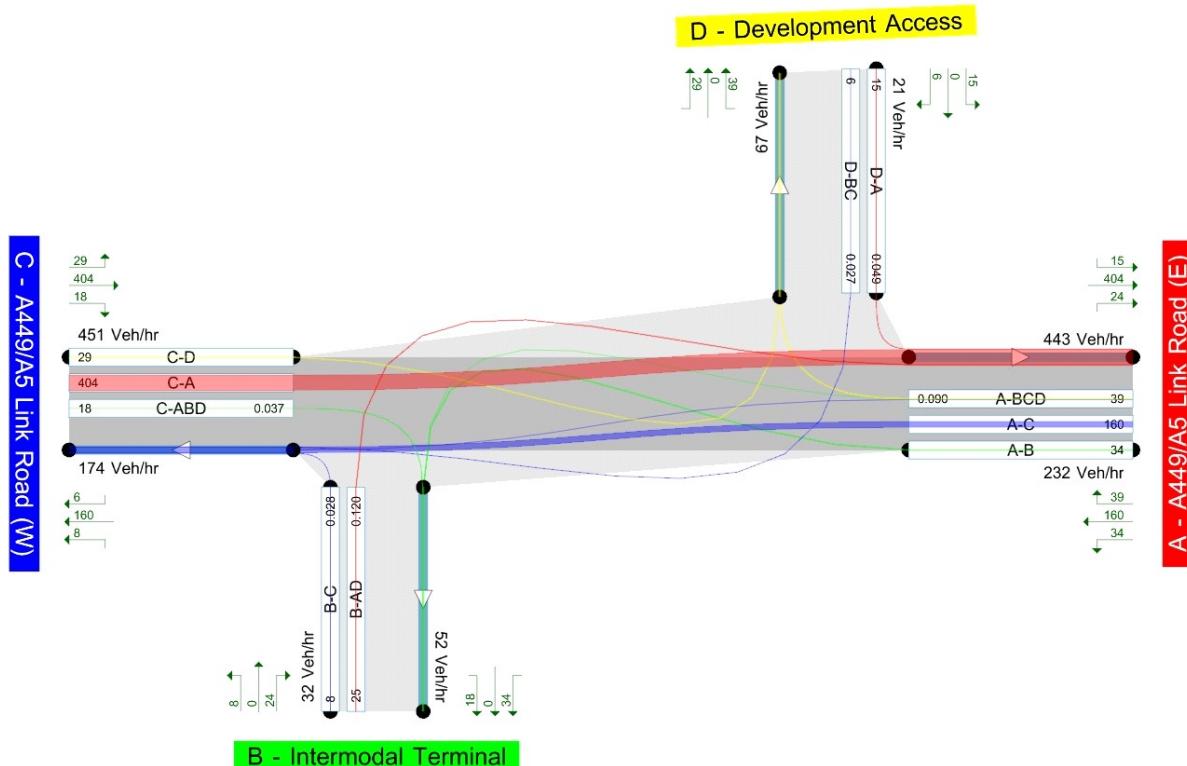

File summary

File Description

Title	(untitled)
Location	
Site number	
Date	20/10/2017
Version	
Status	(new file)
Identifier	
Client	
Jobnumber	
Enumerator	UKSJF002
Description	

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	kph	Veh	Veh	perHour	s	-Min	perMin

Flow by Exit overlay enabled.
Flows show modelled flow through junction (Veh/hr).
Streams (upstream end) show Total Demand (Veh/hr); Streams (downstream end) show RFC ()

Time Segment: 07:45-08:00

The junction diagram reflects the last run of Junctions.

Analysis Options

Vehicle length (m)	Calculate Queue Percentiles	Calculate detailed queueing delay	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
5.75				0.85	36.00	20.00

Demand Set Summary

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)	Run automatically
D1	2021 DS	AM	ONE HOUR	07:45	09:15	15	✓
D2	2021 DS	PM	ONE HOUR	16:45	18:15	15	✓
D3	2021 DS	Shift1	ONE HOUR	12:45	14:15	15	✓
D4	2021 DS	Shift2	ONE HOUR	13:45	15:15	15	✓

Analysis Set Details

ID	Name	Include in report	Use specific Demand Set(s)	Specific Demand Set(s)	Network flow scaling factor (%)	Network capacity scaling factor (%)
A1	Intermodal Terminal Staggered Junction	✓	✓	D3,D4	100.000	100.000

Intermodal Terminal Staggered Junction - 2021 DS, Shift1

Data Errors and Warnings

No errors or warnings

Junction Network

Junctions

Junction	Name	Junction Type	Major road direction	Junction Delay (s)	Junction LOS
1	Staggered Site Junction	Right-Left Stagger	Two-way	4.16	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	A449/A5 Link Road (E)		Major
B	Intermodal Terminal		Minor
C	A449/A5 Link Road (W)		Major
D	Development Access		Minor

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Width for right turn (m)	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
A - A449/A5 Link Road (E)	7.00		✓	4.00	136.1	✓	8.00
C - A449/A5 Link Road (W)	7.00		✓	4.00	89.5	✓	10.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Width at give-way (m)	Width at 5m (m)	Width at 10m (m)	Width at 15m (m)	Width at 20m (m)	Estimate flare length	Flare length (PCU)	Visibility to left (m)	Visibility to right (m)
B - Intermodal Terminal	One lane plus flare	10.00	10.00	8.10	7.40	7.30	✓	3.00	81	75
D - Development Access	One lane plus flare	10.00	10.00	6.40	4.10	3.65	✓	2.00	44	30

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Junction	Stream	Intercept (Veh/hr)	Slope for A-B	Slope for A-C	Slope for A-D	Slope for B-A	Slope for B-D	Slope for C-A	Slope for C-B	Slope for C-D	Slope for D-B	Slope for D-C
1	A-D	781	-	-	-	0.289	0.289	0.289	-	0.289	-	-
1	B-AD	650	0.113	0.286	-	-	-	0.180	0.409	0.180	0.113	0.286
1	B-C	709	0.104	0.263	-	-	-	-	-	-	0.104	0.263
1	C-B	748	0.277	0.277	-	-	-	-	-	-	0.277	0.277
1	D-A	741	-	-	-	0.274	0.109	0.274	-	0.109	-	-
1	D-BC	550	0.152	0.152	0.346	0.242	0.096	0.242	-	0.096	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand

Demand Set Details

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)	Run automatically
D3	2021 DS	Shift1	ONE HOUR	12:45	14:15	15	✓

Vehicle mix varies over turn	Vehicle mix varies over entry	Vehicle mix source	PCU Factor for a HV (PCU)
✓	✓	HV Percentages	2.50

Demand overview (Traffic)

Arm	Linked arm	Profile type	Use O-D data	Average Demand (Veh/hr)	Scaling Factor (%)
