WEST MIDLANDS INTERCHANGE

Transport Technical Note 29 – 2036 Junction Assessments

Job Title	West Midlands Interchange		Project Number	70001979
Client	Four Ashes Limited			
TTN No.	29	Date of Issue	October 2017	
Subject	2036 Junction Assessments			
Author	Lewis Walton	Authorised	Neil Findlay / Ian Fielding	
Distribution				

1 INTRODUCTION

1.1In accordance with Circular 02/2013 The Strategic Road Network and the Delivery of Sustainable Development the highway mitigation required to support WMI has been determined on the basis of an assessment of the operation of the highway network serving the Site at the year of opening of the scheme, i.e. 2021. This assessment reflects the full provision of floor area proposed, together with background traffic growth and committed development traffic.

1.2This assessment of the operation of the highway network serving WMI has been undertaken using the South Staffordshire VISSIM microsimulation model.

1.3Highways England (HE) have also requested an assessment of the future operation of the proposed junctions that will be formed with the Strategic Road Network (SRN) at a year 15 years hence from the opening of the scheme. This assessment is a requirement of the Design Manual for Roads and Bridges (DMRB)TD 37/93. The junctions that would require an assessment at the 2036 future year are as follows: -

- The proposed three arm Roundabout Junction with the A5, and
- The proposed four arm roundabout junction of the A449/Crateford Lane/Gravelly Way

1.4As the purpose of the assessment is only to determine the future operation of the changes to the SRN at 2036, it was agreed with Highways England and their consultants Systra that to undertake a full assessment of the operation of the network considered by the South Staffs VISSIM model would be an unduly onerous exercise. In particular, there is currently uncertainty as to the preferred route strategy of the M54 / M6 / M6 Toll link which prevents forecast changes in traffic flows arising from this HE scheme from being made available.

1.5Therefore it was agreed with HE and Systra that the 2036 assessment would be undertaken on the basis of standalone junction capacity assessments using the Computer Program Junctions9. The basis of the assessment should be the traffic flows obtained from the 2021 South Staffordshire VISSIM model.

2 2036 JUNCTION ASSESSMENTS

2.1In order to undertake this assessment, traffic growth using Tempro 7.2 has been applied to the 2021 Do Minimum 2021 traffic flows in order to produce the 2036 design year. An adjustment has been made to the Tempro growth rate to account for South Staffordshire District Council's (SSDC) forecast housing delivery by 2036 of 4,900 dwellings, which would see a greater level of housing numbers provided than identified within Tempro. SSDC housing delivery forecasts would see a further 577 households coming forward between 2021 and 2036 than identified by Tempro. The growth rate identified has been agreed with Systra on behalf of HE.

2.2WMI development traffic has then been added to the background traffic flows at 2036.

2.3Junctions9 models have then been prepared in order to undertake this assessment. Owing to the level of traffic, the 2036 flows have been assessed using the FLAT profile option. It is assumed that the number of vehicles will cause the peak period to spread by 2036.

2.4The following details are appended to this TN:

- Annex 1 – Tempro growth rate calculations

WEST MIDLANDS INTERCHANGE

Transport Technical Note 29 – 2036 Junction Assessments

- Annex 2 – Confirmation from Systra as to acceptability of the growth rates
- Annex 3 – Measurements used to identify geometric parameters of roundabout arrangements for inclusion in Junctions9 assessments
- Annex 4 – Details of traffic flow diagrams for 2036 future year
- Annex 5 – Junction9 Output files.

2.5 Reviewing the output files of the Junctions9 assessments considers the following values: -

- Ratio to Flow Capacity (RFC)
- Vehicle Queues
- Vehicle Delay (presented as Delay per Vehicle in seconds).

2.6 The output obtained indicates the following: -

- All arms of the A449 and A5 junctions are shown to operate with RFC values within 0.850 during the AM peak hour. No material queues or delays are shown to occur; and
- All arms of the A449 and A5 junctions are shown to operate with RFC values within 0.850 during the PM peak hour. No material queues or delays are shown to occur;

2.7 **Tables 2-1 and 2-2** below show the results derived from the proposed three arm Roundabout Junction with the A5 and the proposed four arm roundabout junction of the A449/Crateford Lane/Gravelly Way respectively.

2036 Base +Dev	AM			PM		
	RFC	Queue	Delay	RFC	Queue	Delay
A5 East	0.663	2	6	0.729	3	7
Site Access	0.375	1	5	0.655	2	10
A5 West	0.652	2	7	0.643	2	8

Table 2-1 – Proposed A5 Site Access

2036 Base +Dev	AM			PM		
	RFC	Queue	Delay	RFC	Queue	Delay
Crateford Ln	0.080	1	10	0.018	1	8
A449 North	0.558	2	4	0.533	2	4
Gravelly Way	0.254	1	5	0.306	1	5
A449 South	0.663	2	5	0.693	3	5

Table 2-2 – Proposed A449 Site Access on Gravelly Way

2.8 It should be noted that no account of the RIS 2 M54 / M6 / M6 Toll link has been included within this assessment. Part of the purpose of this proposed infrastructure is to reduce traffic flows along the A449 corridor. The nature of this scheme is anticipated to consist of through the provision of an all moves connections between the M54 and the M6 at Junction 11.

WEST MIDLANDS INTERCHANGE

Transport Technical Note 29 – 2036 Junction Assessments

3 SUMMARY

3.1 This note has set out the results of the assessment of the future operation of the A5 and A449 site access junctions for the WMI scheme.

3.2 The assessment has been undertaken using the industry standard assessment tool Junctions9 as agreed with HE and their Consultants, Systra. It has utilised an agreed Tempro 7.2 growth rate that has been adjusted to reflect the level of planned growth identified within South Staffordshire between 2021 and 2036.

3.3 The results of the assessment indicate that both the A5 and A449 roundabouts would operate within capacity at 2036, even without the introduction of the proposed M54/M6/M6 Toll link road.

Subject: RE: WMI

Ian

As discussed over the phone, Highways England agree that the Tempro growth rate that has been provided and would be used to factor flows to 2036 is acceptable.

Kind Regards
Nick Oram

Nick

Thank you for your e-mail.

Can I check that you agree with the Tempro growth rate that we have provided and would be used to factor flows to 2036? It was not clear from your response. We will of course provide ARCADY models of the A5 and A449 at these future year thresholds and will provide this information as soon as confirmation of the growth rate is provided to us.

Thank you for confirming that the assessment of M6 Junction 12 should use the VISSIM model output.

By copy to Kristie, are you now able to confirm that the merge / diverge assessment we have provided meets with your approval?

Kind regards

Ian Fielding

Good Evening Ian,

In response to your points on the modelling of the roundabouts and M6 Junction 12:

1. I can confirm that the future year flows should be used to test the proposed A5 and A449 access roundabouts, using a junction assessment package like ARCADY.
2. I can also confirm that the traffic flows used within the merge/diverge assessment of M6 Junction 12 utilise the data from the South Staffs VISSIM model.

If you have any further questions or wish to query my response please contact me.

Regards

Nick Oram

Hi Chris

In relation to the second point Ian has raised.

According to previous discussions between ourselves, I believe the South Staffs Model validation report should confirm that the HE Web Tris flows in 2015 obtained at M6 Junction 12 were similar to the 2015 base Model flows. Confirming the Base model is truly representative of the current Network operation. Could you confirm this please?

Chris

We have not spoken before but I work with Neil Findlay and Laura Bazley on the WMI project. I understand that arising from the last meeting, there were a few actions with yourself and I wonder if I could seek progress if I may. It might be that you have directly responded to Neil and Laura on these points, but as they are both away at present I thought it best to get in touch with you directly.

Below are the points I was hoping you could respond

1. Laura's e-mail of 22 August 2017 in respect of the proposed Tempro growth rate to be used to factor traffic flows to a future year of 2036. For clarity, these future year flows would be used to test the proposed A5 and A449 access roundabouts.
2. Confirmation that the traffic flows used within the merge/diverge assessment of M6 Junction 12 should be utilise the data from the South Staffs VISSIM model.

If you could revert back on the above points, I would be very grateful. Of course by all means give me a call if you wish to discuss.
