Re Secretary of State's request for comments

Regn: 20010908

Dear Sirs,

I have read the applicants response to the request for comments by the Secretary of State on the impact on air quality of construction work for the Northampton Gateway Project.

I am a resident of Milton Malsor which is within 1/2 mile from the site. Even though I am a lay person I find it difficult to understand that the developer can claim that construction work will have a 'negligible' impact on my community.

Emissions from dust will be carried across the surrounding area regardless of wind direction.

This application will impact severely on the locality if it is approved by Government. The period of construction must seriously affect the health of people living in very close proximity. A development of this size does not fit into a rural area.

I urge the Minister of Transport to understand & appreciate the grave concerns of myself and the local community.

Yours faithfully,

Brenda Jenks
