Response to the Secretary of State

Deadline 26th September 2019

Northampton Gateway Rail Freight Interchange (TR050006)

Response to the question regarding Air Quality:

It would appear the developer has given little mention regarding the impact of dust and debris while working alongside an existing operational railway. My prime concerns are:

1. The lack of consultation with Network Rail, whom I consider to be a “sensitive receptor” in this case.
2. The lack of detail in the rail design (GRIP stage)
3. With so many earthworks planned next to the railway, will a reduced running speed come into play.

Yours faithfully

John Exley
