Dear Sirs/Madams

I note the recent comments objections and status of this Planning Application

I formal object to the material/non material change to the application,the use of a rail link being delayed/ perhaps cancelled,The bases of the original agreed consent included the rail head a key element to the Development for the operation from early completion of any occupied unit.

Further studies of this must determine the adverse impact to the local environment and road infrastructure which has been ignored.I remain concerned the future wellbeing of a rural environment will become damaged beyond repair.The rail head was a key element to the Scheme so any change is a serious, fundamental ...material change to this overall developments basis of design and environmental impact has not been determined

I disagreed strongly to this action which requires further study discussion and formal planning consent before any element of the development proceeds .

Yours faithfully

Carol Bishop
