

I make this representation having read the Rule Letter and in particular Annex C & Annex E.

As set out in the Burbage Parish Council submission, we have concerns about the quality of the communication of the traffic modelling and the resulting impacts on the local highway. I note that in Annex C 7 bullet 2 the impact of the development on the local road network will be considered, I ask if clarification can be given that the scope of this element will include the effectiveness of public communication of the traffic plans and thus the ability of the local community to make local observations on such plans.

We are also concerned about the disruption (motorway closures) on the strategic road network and the knock on local impacts. I seek assurance that these matters will be covered with the scope of the Principle Issues.

I seek clarification that the issues mentioned above will be covered as necessary in ISH2 to be held on Tuesday 31st October.
