

It would appear that only minimal consideration is still being given to the impact that this scheme will have upon local road networks. Many of the local villages will be heavily impacted by the proposal and little thought has been given to the issues that lorries in particular will cause on narrow country lanes. Also the main traffic route would go past schools and other community facilities and would potentially endanger pedestrians. The impact on local flora and fauna would negatively effect biodiversity in the area and the use of the green field site would leave little green area between the villages and reduce the noise buffer between the motorway and villages.
