[REDACTED]

I have major concerns regarding the Hinckley SRFI development. Living locally I often walk the area in question. I have a serious interest in local wildlife and the natural world.

This development will:

- have a detrimental effect on nearby

Burbage Woods and Common.

- create more air pollution with the massive increase in the volume of road traffic.

- likewise increase air pollution from the greater volume of rail freight traffic (Stationary diesel locomotives rarely have their engines switched off).

- increase noise and light pollution in the immediate area.
- create a massive blot on the landscape in this largely rural area with huge 90 foot high warehouses.

I feel very strongly that this development should not go ahead as more and more of our natural environment is disappearing under concrete.

Regards

Malcolm Clayson
