1 Introduction

1.1 Anglian Water Services Limited

1.1.1 —Anglian Water Services Limited (the 'Applicant') is the largest regulated water and water recycling company in England and Wales by geographic area, supplying water and water recycling services to almost seven million people in the East of England and Hartlepool.

1.1.2 —The Applicant is committed to bringing environmental and social prosperity to the region they serve, through their commitment to Love Every Drop. As a purpose-led business, The Applicant seeks to contribute to the environmental and social wellbeing of the communities within which they operate. As one of the largest energy users in the East of England, they are also committed to reaching net zero carbon emissions by 2030.

1.2 ~~Background~~ Introduction to the relocation project

~~1.2.1 The Applicant is proposing to build a modern, low carbon waste water treatment for~~1.2.1 Anglian ~~Gre~~Water's Cambridge ~~on a new site area north of the A14 between Fen Ditton and~~ Waste Water Treatment Plant Relocation project (CWWTPRP) ("the Proposed Development") is funded by Homes England, the Government's housing accelerator which seeks to improve neighbourhoods and grow communities by releasing land for development.

~~Horningsea within the Cambridge drainage catchment area, to replace the plant on Cowley Road, hereafter referred to as~~1.2.2 The Proposed Development involves the relocation of the existing Cambridge Waste Water Treatment Plant (WWTP) currently operating at Cowley Road, Cambridge, to a new site between Horningsea, Fen Ditton and Stow cum Quy, adjacent to the A14 in Cambridgeshire.

1.2.~~2~~3 ~~The relocation will enable South Cambridgeshire District Council and Cambridge~~

would make the site of the existing WWTP available to form part of the~~City Council's long held ambition to~~ development of a new low-carbon city district, ~~on~~ known as North East Cambridge. The site at Cowley Road, is Cambridge's last major brownfield site, ~~known as~~and the wider North East Cambridge~~.~~ district proposals envisage creating around 8,350 homes and 15,000 jobs over the next 20 years. ~~The site is an important component of the First Proposals (preferred options) for the new~~

1.2.4 North East Cambridge is a highly sustainable location for housing. In addition to the Homes England funding, the area has benefitted from Transport Infrastructure Fund (TIF) funding for Park & Ride, the completion of

Cambridge Guided Bus public transport infrastructure, the delivery of the Cambridge North rail station and the Chisholm Trail.

1.2.5 North East Cambridge is one of three key strategic sites which will form "*central building blocks of any future strategy for development*" in the proposed Greater Cambridge Local Plan ~~that were~~being jointly prepared by Cambridge City Council and South Cambridgeshire District Council that will be subject to public consultation in ~~late~~Autumn 202~~1~~3. The North East Cambridge Area Action Plan ~~has also been agreed by the Councils~~(AAP), currently in ~~its~~ "Proposed Submission" form ~~and~~, will be ~~subject to public consultation prior to submission, once~~the planning

policy framework which ultimately guides the ~~D~~development ~~Consent Order is determined.~~of ~~The relocation of the existing waste water treatment facility will enable this new district to come forward and deliver 8,350 homes, 15,000 new jobs and a wide range of community, cultural and open space facilities in~~ North East Cambridge~~.~~ city district ~~Further details on this can be found in our Statement of Requirement (Application Document Reference 7.2) which was published in September 2019.~~

~~1.2.3 The relocation of the waste water treatment plant will also allow The Applicant to~~

~~continue providing vital waste water services to customers across Cambridge and Greater Cambridge. The new plant will continue storing and treating storm flows and treating sludge to produce renewable energy. It will be designed to deal with a growing population. It offers the opportunity for a joined-up solution for treating waste water from Cambridge and Greater Cambridge, including Waterbeach. The proposal is for both waste water from the existing Waterbeach waste water treatment plant and future flows from Waterbeach New Town to be treated at the proposed Cambridge waste water treatment plant~~.

1.2.4~~6~~ ~~The~~ importance of the Proposed Development ~~will be the first waste water project to seek a~~

, both regionally and nationally, was recognised by ~~Development Consent Order that is not specifically named in the National Policy~~

~~Statement (NPS). 'The Applicant' sought and obtained a direction from~~ the Secretary of State ~~under section 35 of the Planning Act 2008 ("the 2008 Act") that the project~~for Environment, Food and Rural Affairs (DEFRA) in January 2021, who directed that the Proposed Development is nationally significant and is to be treated as a development ~~of national significance.~~for which a Development Consent Order (DCO) is required (see Appendix 1-3 of the Planning Statement, App Doc Ref 7.5).

~~**1.3**~~ ~~The~~1.2.7 The policy context of the Proposed Development is described in more detail in the Planning Statement (Application Document Reference 7.5)

1.3 ~~1.3.1 This section provides a high-level summary of the Proposed Development. The term Proposed Development refers to the Cambridge Waste Water Treatment Plant (WWTP) Relocation project in its entirety and all works associated with the development.~~ The relocation site

~~1.3.2~~ 1.3.1 The relocation site was selected following comprehensive study and public consultation. ~~A detailed description of the Proposed Development can be found~~ The site selection process and consideration of alternatives is described in more detail in Chapter ~~2~~3: Alternatives of the Environmental Statement (App Doc Ref 5.2.~~2~~3).

1.3.~~3~~2 ~~The purpose of the proposed WWTP will be to treat all waste water and wet sludge from the Cambridge catchment just as~~current environmental conditions at the existing Cambridge WWTP ~~currently does, plus that from the growth indicated and being planned within the catchment in the Local Plan to 2041, with ability to expand beyond to deal with further growth.~~site and at the relocation site are described in Chapter 2: Project Description of the Environmental Statement (App Doc Ref 5.2.2).

~~1.3.4 As part of its statutory function, the Applicant operates~~ The site is located to the north-east of Cambridge and 2km to the east of the existing Cambridge WWTP~~.~~, as shown on the Works Plans (App Doc Ref 4.3.1). It is situated on arable farmland immediately north of the A14 and east of the B1047 Horningsea Road in the green belt between the villages of Horningsea to the north, Stow cum Quy to the east and Fen Ditton to the south west. Two overhead lines of pylons cross the northern and eastern edges of the main development site and come together with a third line at the north eastern corner of the site. The topography is fairly flat with an approximately 4m fall across the site south west to north east.

1.4 Purpose of the Proposed Development

1.4.1 The Proposed Development for which the DCO is being sought will deliver all the functions of ~~T~~the existing Cambridge WWTP ~~receives~~at Cowley Road, treating all waste water from the Cambridge catchment ~~either directly from the connected sewerage network or tankered to the plant from homes and businesses that are not connected.~~and wet sludge from the wider region. ~~This waste water is then treated and the treated effluent discharged through an outfall to the nearby River~~

~~Cam. The existing Cambridge WWTP is an integrated WWTP, as would be the Proposed Development. Integrated WWTP incorporate a sludge treatment function, in the form of a Sludge Treatment Centre (STC), which treats the sludge derived from the~~1.4.2 In addition, it will have an increased capacity, being intended to treat the waste water from the ~~catchment, and the "wet~~

~~sludge" produced by other satellite plants which do not have integrated STC.~~Waterbeach catchment and anticipated housing growth in the combined Cambridge and Waterbeach catchment area.

~~1.3.5 The Waterbeach New Town development lies to the north of Cambridge. When built out Waterbeach new town will comprise some 11,000 new homes along with associated business, retail, community and leisure uses. Waste water from Waterbeach will ultimately be treated by the proposed Cambridge WWTP once operational. However, the rate of development at Waterbeach New Town may require a new pipeline (rising main) to be built from Waterbeach to the existing Cambridge WWTP to allow treatment of waste water in advance of the proposed WWTP becoming operational. In that case, either a later connection would be made to the proposed WWTP from a point on the pipeline route, or flows diverted from the existing Cambridge WWTP via~~1.4.3 The infrastructure provided as part of the main works will have a design life to at least 2090, and the supporting infrastructure (i.e. the transfer tunnel~~-~~, pipelines and outfall) will have a designed capacity sufficient to meet population growth projections plus an allowance for climate change into the 2080s. Furthermore, there is capability for expansion in space that has been provided within the earth bank and by modification, enhancement and optimisation of the design to accommodate anticipated flows into the early 2100s.`

1.5 ~~1.3.6 In summary~~Outline description of the Proposed Development ~~will comprise of:~~

1.5.1 The DCO application is seeking approval for the following main elements of the Proposed Development:

- an integrated waste water and sludge treatment plant.
- a shaft to intercept waste water at the existing Cambridge WWTP on Cowley Road and a tunnel/ pipeline to transfer it to the proposed WWTP and terminal pumping station. Temporary intermediate shafts to launch and recover the micro-tunnel boring machine.
- a gravity pipeline transferring treated waste water from the proposed WWTP to a discharge point on the River Cam and a pipeline for storm water overflows.
- a twin pipeline transferring waste water from Waterbeach to the existing Cambridge WWTP, with the option of a connection direct in to the proposed WWTP when the existing works is decommissioned.
- ~~ancillary~~ on-site buildings, including ~~-~~ a Gateway Building with incorporated Discovery Centre, substation building, workshop, vehicle parking including electrical vehicle charging points, fencing and lighting.

- environmental mitigation and enhancements including substantial biodiversity net gain, improved habitats for wildlife, extensive landscaping, a landscaped earth bank enclosing the proposed WWTP, climate resilient drainage system and improved recreational access and connectivity.
- ~~R~~renewable energy generation via anaerobic digestion which is part of the sludge treatment process that produces biogas designed to be able to feed directly into the local gas network to heat homes, or as an alternative potential future option burnt in combined heat and power engines.
- renewable energy generation via solar photovoltaic and associated battery energy storage system.
- other ancillary development such as internal site access, utilities, including gas, electricity and communications and connection to the site drainage system.
- a new vehicle access from Horningsea Road including for Heavy Goods Vehicles (HGV's) bringing sludge onto the site for treatment and other site traffic.
- Temporary construction works including compounds, temporary highway controls, accesses and signage, fencing and gates, security and safety measures, lighting, welfare facilities, communication control and telemetry infrastructure.
- Decommissioning works to the existing Cambridge WWTP to cease its existing operational function and to facilitate the surrender of its operational permits including removal of pumps, isolation of plant, electrical connections and pipework, filling and capping of pipework, cleaning of tanks, pipes, screens and other structures, plant and machinery, works to decommission the potable water supply and works to restrict access to walkways, plant and machinery.

1.5.2 Additional elements, together with more information on the above features are provided in Chapter 2: Project Description of the Environmental Statement (App Doc Ref 5.2.2). Principles of Good Design have been used to inform the development of the project, which has been guided by the National Infrastructure Commission's Design Principles, advice from the Design Council and review by the Cambridgeshire Quality Panel, as described in the Design and Access Statement (App Doc Ref 7.6).

1.5.3 Construction activities, likely to take 3-4 years, will include the creation of a shaft to intercept waste water at the existing Cambridge WWTP and temporary intermediate shafts between the existing Cambridge WWTP and the proposed WWTP to launch and recover a micro-tunnel boring machine. The sequence and location of construction activities are also detailed in Chapter 2: Project Description of the Environmental Statement (App Doc Ref 5.2.2).

1.5.4 Towards the end of the construction period, commissioning of the Proposed Development will commence, lasting for between 6 months and 1 year.

1.5.5 The Proposed Development will also involve the decommissioning of the existing Cambridge WWTP at Cowley Road. This is secured by the Development Consent Order and the Outline Decommissioning Plan (Appendix 2.3, App Doc Ref 5.4.2.3) and involves activities necessary to take the existing plant out of operational use and to surrender its current operational permits.

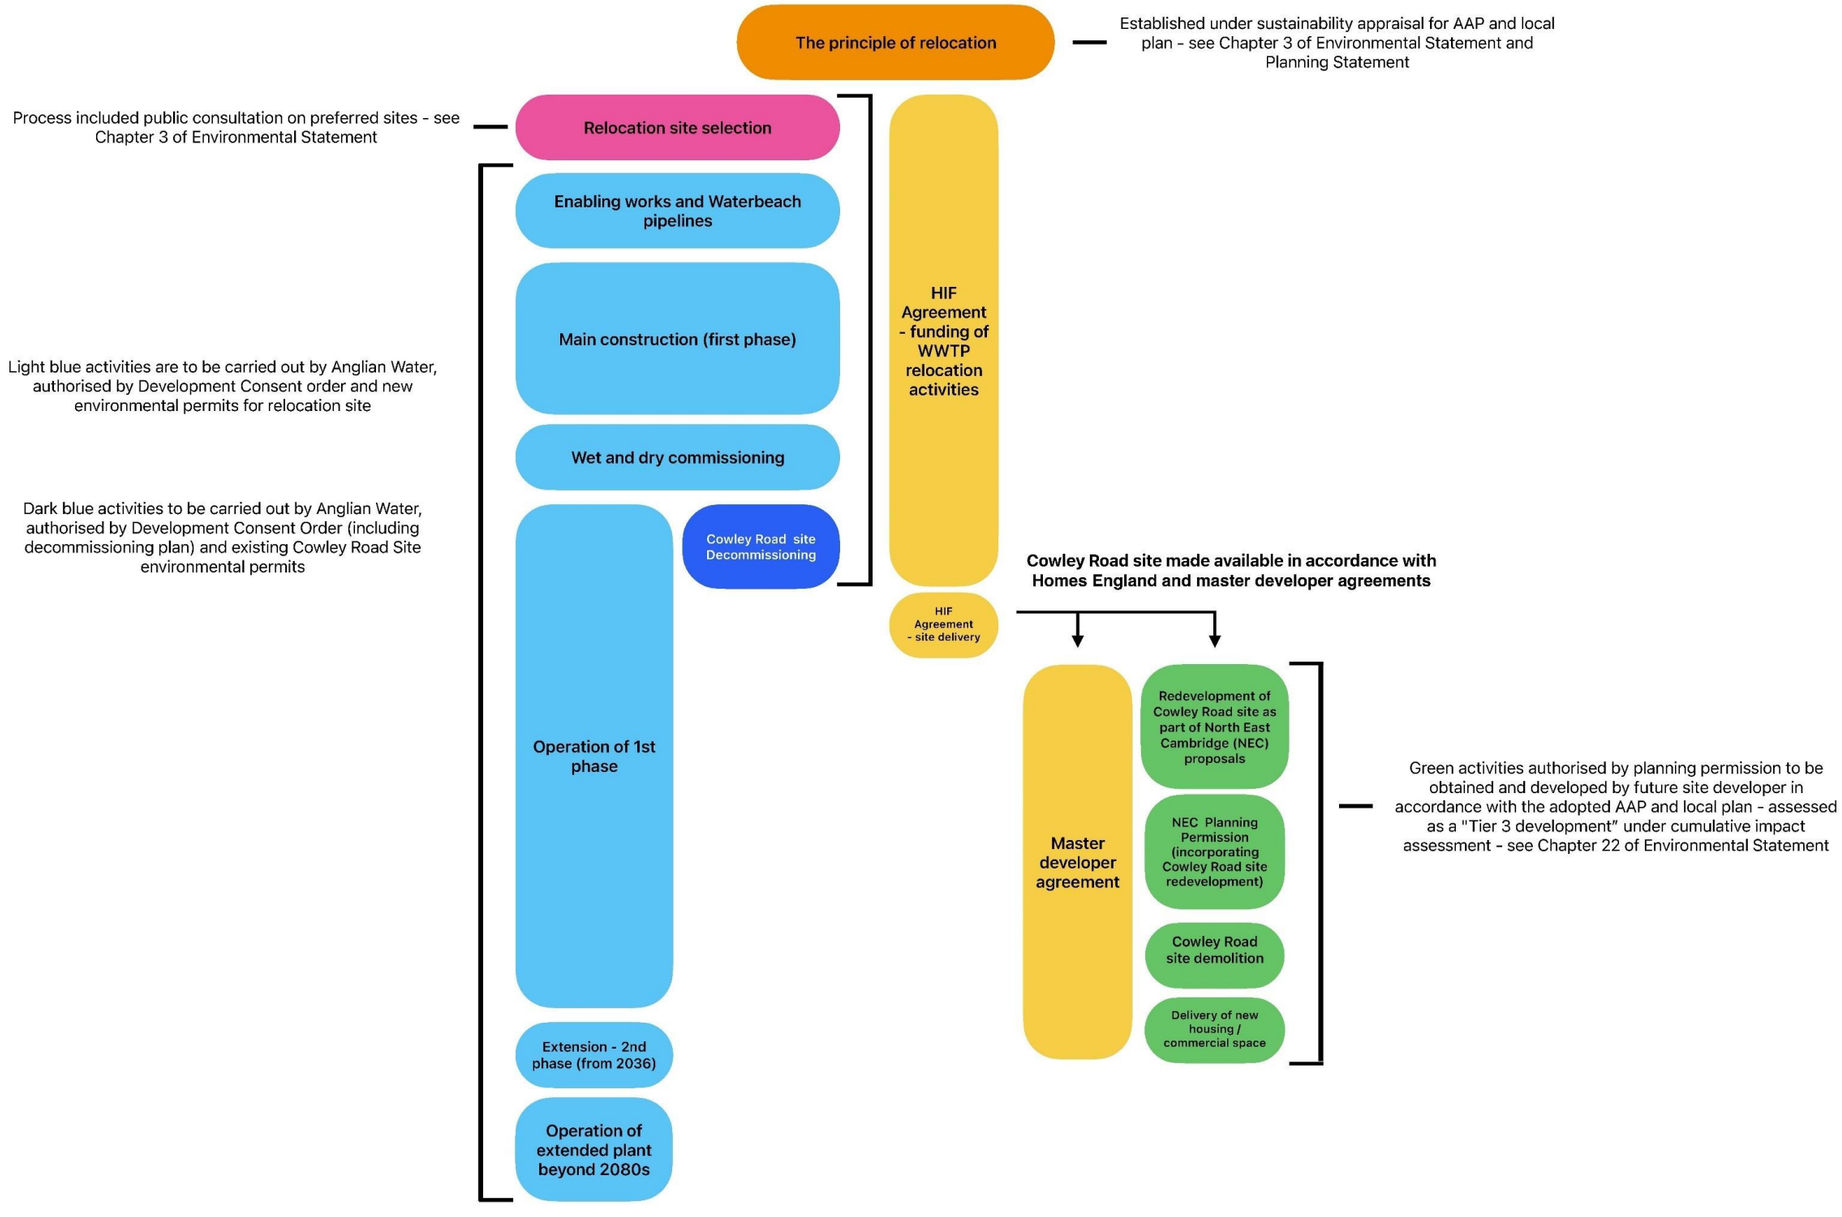
1.5.6 Following decommissioning, the site of the existing plant will be made available in accordance with agreements already in place with Homes England and with the master developer appointed to deliver the redevelopment of North East Cambridge

1.5.7 Consent is not sought under the Development Consent Order for the subsequent demolition or redevelopment of the Cowley Road site, which, as described in Chapter 2: Project Description of the Environmental Statement (App Doc Ref 5.2.2) will be consented under a separate and future planning permission, by master developers, U+I and TOWN, appointed under the agreements described above.

1.5.8 The relationship between the Proposed Development, the scope of the proposed DCO and the future demolition and redevelopment of the site at Cowley Road is set out in figure 1.1, below

~~Cambridge Waste Water Treatment Plant Relocation Project Mitigation Tracker~~

Cambridge Waste Water Treatment Plant Relocation Project Mitigation Tracker



love every drop
anglianwater

1.6 Environmental mitigation

1.6.1 Through the environmental impact assessment process and community and technical stakeholder engagement the Proposed Development has incorporated comprehensive environmental mitigation, secured through the Development Consent Order.

1.6.2 This mitigation includes a Landscape, Ecological and Recreational Management Plan ("LERMP", Appendix 8.14, App Doc Ref 5.4.8.14) has been developed to complement regional and local initiatives, including the Wicken Fen Vision and the Cambridge Nature Network. The 22-hectare footprint of the plant is encircled by a landscaped and planted earth bank situated within the broader LERMP area of around 70-hectares.

1.7 Additional project benefits

1.7.1 In addition to enabling housing growth and future economic development of the Greater Cambridge area the project will also give rise to a number of additional benefits including:

- significantly reduced carbon emissions compared to the existing Cambridge WWTP, being operationally net zero and energy neutral, contributing to Anglian Water's ambition of being operationally net zero as a business by 2030.
- greater resilience and improved storm management, meaning storm overflows and Combined Sewer Overflows (CSOs) are far less likely to occur. This means that, as Greater Cambridge continues to grow, the facility will be able to treat a greater volume of storm flows to a higher standard than would be the case at today's facility.
- The proposed WWTP is being designed to reduce concentration in final treated effluent discharges of phosphorus, ammonia, total suspended solids and biological oxygen demand (BOD), compared to the existing Cambridge WWTP. This means that when the new facility starts to operate, water quality in the River Cam will improve.

2 Mitigation Tracker

2.1.1 ~~—~~The purpose of the Mitigation Tracker is to set out the mitigation measures presented in the Environmental Statement (Volume 5) for the Proposed Development.

2.1.2 ~~—The table below sets out the relevant Environmental Statement topic chapter and the location within those chapters of where the mitigation can be found. The far right hand column of the table sets out the mechanism by which the mitigation has been secured within the DCO application.~~

~~2.1.3 —~~The Mitigation Tracker should be read in conjunction with the Environmental Statement.

~~Cambridge Waste Water Treatment Plant Relocation Project~~

~~Mitigation Tracker~~

~~**Chapter Mitigation Description of impact Mitigation measure Secured by number location**~~

2.1.3 Table 2-1 provides guidance on the content of the mitigation tracker which is provided in Table 2-2.

Table 2-1: Mitigation tracker guidance

Column	Explanation
Mitigation ID	Unique identification number for specific measure
Source	Identifier which is directly related to the mitigation identified within the ES or other application documentation
Description of impact	Details of impact for which mitigation is applied to
Mitigation / commitment	Summary of the mitigation as identified within the source document.
Phase	Project phase that the measure will apply or be initiated
Reference documents	Where the mitigation measure is referenced or identified within the application documents
Securing mechanism	How the mitigation is secured such as a direct Requirement of the DCO or as s106
Related mitigation	Impacts which rely on the implementation of mitigation assigned to other impacts for example impacts to community receptors recorded in ES Chapter 11:Community are reliant on measures applied to control noise, air, odour and traffic and transport impacts.

		effects due to works within the existing Cambridge WWTP, and works to construct the Waterbeach pipeline and Clayhithe	Management of construction activities that may impact community health and wellbeing will be through measures as described within the CoCP Part A and B (Appendix 2.1 & 2.2, App Doc Ref 5.4.2.1 &5.4.2.2): • the management of air quality as set out within Section ~~6.9~~7.8 of the CoCP Part A, Air quality, sets out a framework for the control of air quality during construction, identifying a number of 'standard' mitigation measures which will be implemented whilst construction work takes place. These will be reflected in an Air Quality/Dust Management Plan (AQMP) appended to/as part of the CEMP. This includes the following general measures to be will put in place to minimise emissions and avoid nuisance: – the engines of all vehicles and plant onsite will be turned off when not in use; – low emission vehicles and plant will be used as far as possible; and – movement of construction traffic around the working area will be minimised as far as possible • the management of noise impacts as set out within the CoCP Part A, Section 7.7, Noise and vibration which requires the application of best practicable measures (BPM) as defined by the Control of Pollution Act 1974 (CoPA) and the Environmental Protection Act 1990 (EPA) for the control of noise. These measures are to be reflected within the Noise and Vibration Management Plan (NVMP) appended to/as part of the CEMP. – Restriction of working hours to avoid sensitive time periods for works at Shaft 4 and the Outfall. – Use of solid site hoarding/temporary acoustic barriers at Shaft 4, Waterbeach construction compound and around HDD pit locations/HDD plant during continuous working periods • ~~M~~management of construction vehicle movements described within the CTMP (Appendix 19.7, App Doc Ref 5.4.19.7) to minimise disruption on the public highway in particular: – Section 6.3 Adherence to Designated Routes – Section 6.9 requirement for speed restrictions to Burgess's Drove, Bannold Drove and Bannold Road as well as Clayhithe Road will be put in place in accordance with the Temporary Traffic Regulation Order set out within an article in the DCO – Implementation of Construction Worker Travel Plan to encourage construction workers to use more sustainable travel modes, to reduce single occupancy vehicle trips and will investigate the potential for flexible working patterns to facilitate travel outside of the peak periods.	(Appendix 2.1, App Doc Ref 5.4.2.1) Construction Traffic Management Plan (Appendix 19.7, App Doc Ref 5.4.19.7) Outline Construction Worker Travel Plan (5.4.19.9) Outline Decommissioning Plan (Appendix 2.3, App Doc Ref 5.4.2.3) Lighting Design Strategy (Appendix 2.5, App Doc Ref 5.4.2.5).

Table 5.2 - Securing Mitigation

Impact of dewatering of West Melbury Marly Chalk Formation on a surface water abstraction for nearby private

Groundwater management

Management of dewatering on the changes to groundwater through:

- maintaining regular contact with the owner of a agriculture (spray irrigation) borehole during construction and putting in place measures to in Black Ditch maintain supply to the property if required. These will be outlined in the CEMP.
- there will not be any dewatering to the Black Ditch itself.

Monitoring of water levels in available monitoring boreholes within the landrequired for proposed WWTP and landscape masterplan, would be undertaken for a period prior to, during and following all dewatering activities during construction at the proposed WWTP in order to inform management response should monitoring indicate a change in groundwater flows as a result of dewatering. Management responses may include but not be limited to reducing or ceasing dewatering or amending dewatering points and would be agreed through consultation with the Environment Agency.

The scope of the monitoring including its duration will be agreed with all relevant stakeholders before commencement of works which could potentially impact the ditch.

Requirement for a water monitoring plan to include specific provision for water quality monitoring at the specified location through a requirement of the draft DCO (App Doc Ref 2.1).

MA-11	Chapter 22 Major accidents	Event risk- fire or explosion: battery storage	**Drainage Design** The drainage system includes a segregated system which would capture design run-off from firefighting activities for treatment within the proposed WWTP. The Drainage Strategy (App Doc Ref 5.4.20.12) requires that the Groundwater Protection (Environment Agency, 2018) are to be followed in relation to Drainage Strategy (App Doc Ref 5.4.20.12) sets out how the drainage design will align with the	Operation	Drainage Strategy (App Doc Ref 5.4.20.12) DCO Schedule 2 requirements of the Environment Agency Approach to design the detailed drainage design. Section 4.8 of the	DCO Schedule 2 Requirement 7 - Detailed design DCO Schedule 2 Requirement 14 – Drainage Approach to Groundwater Protection. design

on Project

impact	Mitigation measure		Phase	Reference document	Securing mechanism
MA-12	Chapter 22 Major accidents	Event risk – Compromised site security	**Design** Design measures include the earth bank as well as perimeter fencing, the use of surveillance equipment to monitor the facility, security-controlled access, and egress points. Physical security design measures following NSPA guidance (NSPA, 2023) will be incorporated to ensuring the site is secure from unauthorized personnel.	Operation	ES Chapter 2 Project Description section 2.13 Further associated development and site-wide provisions, Fencing and security (App Doc Ref 5.2.2) ES Chapter 22 Major Accidents and Disasters Table 2-1 Design measures relating to major accidents and disasters adopted as part of the Proposed Development (App Doc Ref 5.2.22)	DCO Schedule 2 Requirement 7 - Detailed design DCO Schedule 2 Requirement 4 – Parameters DCO Schedule 2 Requirement 7 – Detailed design
MA-13	Chapter 22 Major accidents 5.1	Event risk – Compromised site security	**Operational Management Systems** To mitigation against an on-site incident, under the EMS and operation procedures development for the proposed WWTP, the operator will environmental prepare and test emergency procedures for dealing with the management (App Doc Ref consequences of a major accident including those resulting from malicious attacks. Visitors to the Discovery Centre will be by appointment only.	Operation	ES Chapter 2 Project Description Section Operation, Operational Environmental permit 5.2.2)	Environmental permit
MA-14	Chapter 22 Major accidents	Event risk – Compromised cyber security	**Software Design**	Operation	ES Chapter 2 Project Description section 2.13 Further associated development and site-wide	Environmental permit
