

Cambridge Waste Water Treatment Plant Relocation Project
Anglian Water Services Limited

Appendix 19.3: Transport Assessment Part 3

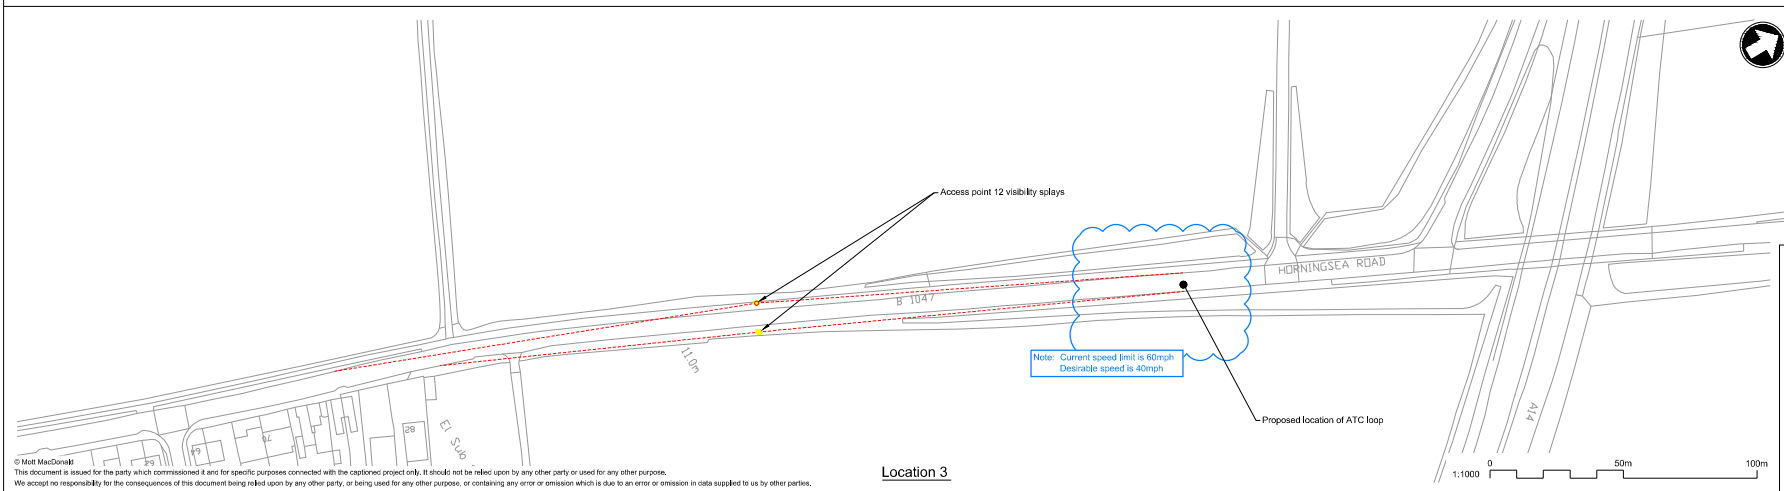

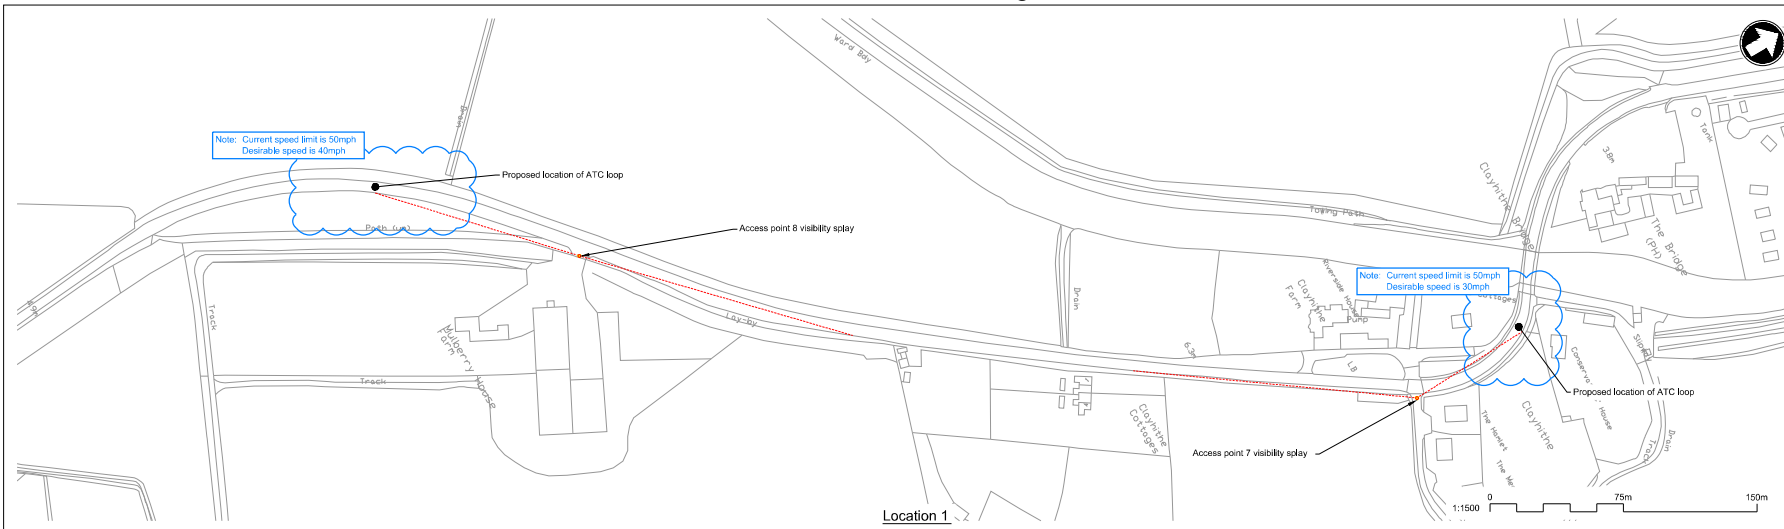

Application Document Reference: 5.4.19.3
PINS Project Reference: WW010003
APFP Regulation No. 5(2)a

Revision No. 05
19 February 2024

Cambridge Waste Water Treatment Relocation Project
Transport Assessment

Appendix L: ATC Speed / Count Surveys

Notes

1. Do not scale from this drawing.
2. All dimensions are in metres unless otherwise shown. All levels are in metres above Ordnance Datum (AOD). All dimensions & levels should be checked on site.
3. Any drawing errors or discrepancies should be brought to the attention of Matt MacDonald at the address shown in the title block.
4. **DRAWING MUST BE READ IN COLOUR**

Queue Length Methodology

The maximum queue length, in vehicles, is reported by lane for each five-minute period.

These are segregated into 'light' and 'heavy' vehicles, and are then presented as a maximum queue length using the assumption that a light vehicle contributes 6m to a queue and a heavy vehicle 15m. These values can be updated by the user.

Vehicle Length Assumptions (metres)

Lights	Heavies
6	15

Additional Notes (Factors which may impact on survey results such as accidents, roadworks, special events)

Any shaded entries indicate where queues reach the extent of the camera view.

Queue Length Methodology

The maximum queue length, in vehicles, is reported by lane for each five-minute period.

These are segregated into 'light' and 'heavy' vehicles, and are then presented as a maximum queue length using the assumption that a light vehicle contributes 6m to a queue and a heavy vehicle 15m. These values can be updated by the user.

Vehicle Length Assumptions (metres)

Lights	Heavies
6	15

Junction Layout

Queue Length Methodology

The maximum queue length, in vehicles, is reported by lane for each five-minute period.

These are segregated into 'light' and 'heavy' vehicles, and are then presented as a maximum queue length using the assumption that a light vehicle contributes 6m to a queue and a heavy vehicle 15m. These values can be updated by the user.

Vehicle Length Assumptions (metres)

Lights	Heavies
6	15

Additional Notes (Factors which may impact on survey results such as accidents, roadworks, special events)

No data is available for December 4th.

Queue Length Methodology

The maximum queue length, in vehicles, is reported by lane for each five-minute period.

These are segregated into 'light' and 'heavy' vehicles, and are then presented as a maximum queue length using the assumption that a light vehicle contributes 6m to a queue and a heavy vehicle 15m. These values can be updated by the user.

Vehicle Length Assumptions (metres)

Lights	Heavies
6	15

Additional Notes (Factors which may impact on survey results such as accidents, roadworks, special events)

Junction Layout

Queue Length Methodology

The maximum queue length, in vehicles, is reported by lane for each five-minute period.

These are segregated into 'light' and 'heavy' vehicles, and are then presented as a maximum queue length using the assumption that a light vehicle contributes 6m to a queue and a heavy vehicle 15m. These values can be updated by the user.

Vehicle Length Assumptions (metres)

Lights	Heavies
6	15

Queue Length Methodology

The maximum queue length, in vehicles, is reported by lane for each five-minute period.

These are segregated into 'light' and 'heavy' vehicles, and are then presented as a maximum queue length using the assumption that a light vehicle contributes 6m to a queue and a heavy vehicle 15m. These values can be updated by the user.

Vehicle Length Assumptions (metres)

Lights	Heavies
6	15

Additional Notes (Factors which may impact on survey results such as accidents, roadworks, special events)

Any shaded entries indicate where queues reach the extent of the camera view.

Junction Layout

Queue Length Methodology

The maximum queue length, in vehicles, is reported by lane for each five-minute period.

These are segregated into 'light' and 'heavy' vehicles, and are then presented as a maximum queue length using the assumption that a light vehicle contributes 6m to a queue and a heavy vehicle 15m. These values can be updated by the user.

Vehicle Length Assumptions (metres)

Lights	Heavies
6	15

Additional Notes (Factors which may impact on survey results such as accidents, roadworks, special events)

Any shaded entries indicate where queues reach the extent of the camera view.

Junction Layout

Queue Length Methodology

The maximum queue length, in vehicles, is reported by lane for each five-minute period.

These are segregated into 'light' and 'heavy' vehicles, and are then presented as a maximum queue length using the assumption that a light vehicle contributes 6m to a queue and a heavy vehicle 15m. These values can be updated by the user.

Vehicle Length Assumptions (metres)

Lights	Heavies
6	15

Junction Layout

Queue Length Methodology

The maximum queue length, in vehicles, is reported by lane for each five-minute period.

These are segregated into 'light' and 'heavy' vehicles, and are then presented as a maximum queue length using the assumption that a light vehicle contributes 6m to a queue and a heavy vehicle 15m. These values can be updated by the user.

Vehicle Length Assumptions (metres)

Lights	Heavies
6	15

Additional Notes (Factors which may impact on survey results such as accidents, roadworks, special events)

Junction Layout

Queue Length Methodology

The maximum queue length, in vehicles, is reported for each time the level crossing barrier raises.

These are broken down fully into the standard seven user classes, and then presented in Total Vehicles and also Total PCUs.

The PCU assumptions used can be updated by the user.

PCU Assumptions

Car	LGV	OGV1	OGV2	Bus	M/C	Cycle
1.0	1.0	1.5	2.3	2.0	0.4	0.2

Additional Notes (Factors which may impact on survey results such as accidents, roadworks, special events)

Any shaded entries indicate where queues reach the extent of the camera view.

Queue Length Methodology

The maximum queue length, in vehicles, is reported by lane for each five-minute period.

These are segregated into 'light' and 'heavy' vehicles, and are then presented as a maximum queue length using the assumption that a light vehicle contributes 6m to a queue and a heavy vehicle 15m. These values can be updated by the user.

Vehicle Length Assumptions (metres)

Lights	Heavies
6	15

Additional Notes (Factors which may impact on survey results such as accidents, roadworks, special events)
 Any shaded entries indicate where queues reach the extent of the camera view.

Lanes D3 and E3 are dedicated left turn lanes so have no queues to analyse.

Junction Flow Profile

Arm Approach Flows (All Vehicles)

Additional Notes (Factors which may impact on survey results such as accidents, roadworks, special events):

Due to significant headlight glare, the accuracy of the lane designation of the C-A movements may be affected between 07:00 and 07:45. During the PM Peak, lane designation is not possible so all C-A movements have been assigned to Lane C3.

Intelligent Data Collection Limited

Client: Mott MacDonald
Project Number: ID06180
Site Number: Site 12
Dates of Survey: 04.12.2021, 07.12.2021 and 08.12.2021
Junction Name: A1309 Milton Road / Cowley Road
Survey Type: Queue Length Survey

X Coordinate	Y Coordinate	Google Maps Link
52.232796	0.150627	Click Here

Queue Length Methodology

The maximum queue length, in vehicles, is reported by lane for each five-minute period.

These are segregated into 'light' and 'heavy' vehicles, and are then presented as a maximum queue length using the assumption that a light vehicle contributes 6m to a queue and a heavy vehicle 15m. These values can be updated by the user.

Vehicle Length Assumptions (metres)

Lights	Heavies
6	15

Additional Notes (Factors which may impact on survey results such as accidents, roadworks, special events)
 Due to heavy sunlight and headlight glare, queues for Arm C may not be accurate during the first 45 minutes of the AM Peak on the 7th and 8th, and throughout the survey on the 4th. The PM Peak on December 7th and 8th were unable to be analysed.

Junction Layout

Queue Length Methodology

The maximum queue length, in vehicles, is reported by lane for each five-minute period.

These are segregated into 'light' and 'heavy' vehicles, and are then presented as a maximum queue length using the assumption that a light vehicle contributes 6m to a queue and a heavy vehicle 15m. These values can be updated by the user.

Vehicle Length Assumptions (metres)

Lights	Heavies
6	15

Queue Length Methodology

The maximum queue length, in vehicles, is reported by lane for each five-minute period.

These are segregated into 'light' and 'heavy' vehicles, and are then presented as a maximum queue length using the assumption that a light vehicle contributes 6m to a queue and a heavy vehicle 15m. These values can be updated by the user.

Vehicle Length Assumptions (metres)

Lights	Heavies
6	15

Intelligent Data Collection Limited

Client: Mott MacDonald
Project Number: ID06180
Site Number: Site 15
Dates of Survey: 04.12.2021, 07.12.2021 and 08.12.2021
Junction Name: A1309 Milton Road / Cowley Park
Survey Type: Queue Length Survey

X Coordinate	Y Coordinate	Google Maps Link
52.230467	0.149534	Click Here

Queue Length Methodology

The maximum queue length, in vehicles, is reported by lane for each five-minute period.

These are segregated into 'light' and 'heavy' vehicles, and are then presented as a maximum queue length using the assumption that a light vehicle contributes 6m to a queue and a heavy vehicle 15m. These values can be updated by the user.

Vehicle Length Assumptions (metres)

Lights	Heavies
6	15

Additional Notes (Factors which may impact on survey results such as accidents, roadworks, special events)

Any shaded entries for Arm A indicate where queues reach back to the upstream signalised junction (Cambridge Science Park Road / Milton Road).

Arm A footage is not available from 07:55 to 08:10 (07.12.2021). Arm B footage is not available from 07:00 to 07:50 (07.12.2021).

For Lanes C2 and C3, as the stopline was not visible, only queues that reach past the yellow line marked above are visible. Once queues reach back to this point, an alternative view is available to determine how many cars are in front of them as they enter the junction. Any queues of two vehicles or less are not able to be recorded.

Queue Length Methodology

The maximum queue length, in vehicles, is reported by lane for each five-minute period.

These are segregated into 'light' and 'heavy' vehicles, and are then presented as a maximum queue length using the assumption that a light vehicle contributes 6m to a queue and a heavy vehicle 15m. These values can be updated by the user.

Vehicle Length Assumptions (metres)

Lights	Heavies
6	15

Additional Notes (Factors which may impact on survey results such as accidents, roadworks, special events)

Saturation Flow Methodology

Analysis of full demand starts from the third vehicle to cross the stop line. Full demand applies when at least 6 PCUs cross the stop line with a maximum gap of three seconds between vehicles.

Additional Notes (Factors which may impact on survey results such as accidents, roadworks, special events)

Some lanes have limited or no instances of full demand, due to short green times or low flows.

Queue Length Methodology

The maximum queue length, in vehicles, is reported by lane for each five-minute period.

These are segregated into 'light' and 'heavy' vehicles, and are then presented as a maximum queue length using the assumption that a light vehicle contributes 6m to a queue and a heavy vehicle 15m. These values can be updated by the user.

Vehicle Length Assumptions (metres)

Lights	Heavies
6	15

Additional Notes (Factors which may impact on survey results such as accidents, roadworks, special events)

Any shaded entries indicate where queues reach the extent of the camera view.

Queue Length Methodology

The maximum queue length, in vehicles, is reported by lane for each five-minute period.

These are segregated into 'light' and 'heavy' vehicles, and are then presented as a maximum queue length using the assumption that a light vehicle contributes 6m to a queue and a heavy vehicle 15m. These values can be updated by the user.

Vehicle Length Assumptions (metres)

Lights	Heavies
6	15

Additional Notes (Factors which may impact on survey results such as accidents, roadworks, special events)

Any shaded entries indicate where queues reach the extent of the camera view.

Due to a camera being moved, no queue data is available for Arm C after 08:20 on December 8th.

Intelligent Data Collection Limited

Client: Mott MacDonald
 Project Number: ID06180
 Site Number: Site 18
 Date of Survey: 07.12.2021
 Junction Name: A1309 Milton Road / Green End Road / Kings Hedges Road
 Survey Type: Queue Length Survey

Junction Layout

Queue Length Methodology

The maximum queue length, in vehicles, is reported by lane for each five-minute period.

These are segregated into 'light' and 'heavy' vehicles, and are then presented as a maximum queue length using the assumption that a light vehicle contributes 6m to a queue and a heavy vehicle 15m. These values can be updated by the user.

Vehicle Length Assumptions (metres)

Lights	Heavies
6	15

Additional Notes (Factors which may impact on survey results such as accidents, roadworks, special events)

Junction Layout

Queue Length Methodology

The maximum queue length, in vehicles, is reported by lane for each five-minute period.

These are segregated into 'light' and 'heavy' vehicles, and are then presented as a maximum queue length using the assumption that a light vehicle contributes 6m to a queue and a heavy vehicle 15m. These values can be updated by the user.

Vehicle Length Assumptions (metres)

Lights	Heavies
6	15

Additional Notes (Factors which may impact on survey results such as accidents, roadworks, special events)

Queue Length Methodology

The maximum queue length, in vehicles, is reported by lane for each five-minute period.

These are segregated into 'light' and 'heavy' vehicles, and are then presented as a maximum queue length using the assumption that a light vehicle contributes 6m to a queue and a heavy vehicle 15m. These values can be updated by the user.

Vehicle Length Assumptions (metres)

Lights	Heavies
6	15

Queue Length Methodology

The maximum queue length, in vehicles, is reported by lane for each five-minute period.

These are segregated into 'light' and 'heavy' vehicles, and are then presented as a maximum queue length using the assumption that a light vehicle contributes 6m to a queue and a heavy vehicle 15m. These values can be updated by the user.

Vehicle Length Assumptions (metres)

Lights	Heavies
6	15

Additional Notes (Factors which may impact on survey results such as accidents, roadworks, special events)
 Any shaded entries indicate where queues reach the extent of the camera view.

Due to headlight glare, the views for Arm D are slightly reduced in the PM Peak on December 7th and 8th.

Queue Length Methodology

The maximum queue length, in vehicles, is reported by lane for each five-minute period.

These are segregated into 'light' and 'heavy' vehicles, and are then presented as a maximum queue length using the assumption that a light vehicle contributes 6m to a queue and a heavy vehicle 15m. These values can be updated by the user.

Vehicle Length Assumptions (metres)

Lights	Heavies
6	15

Additional Notes (Factors which may impact on survey results such as accidents, roadworks, special events)

Any shaded entries indicate where queues reach the extent of the camera view.

Queue Length Methodology

The maximum queue length, in vehicles, is reported by lane for each five-minute period.

These are segregated into 'light' and 'heavy' vehicles, and are then presented as a maximum queue length using the assumption that a light vehicle contributes 6m to a queue and a heavy vehicle 15m. These values can be updated by the user.

Vehicle Length Assumptions (metres)

Lights	Heavies
6	15

Additional Notes (Factors which may impact on survey results such as accidents, roadworks, special events)

Queue Length Methodology

The maximum queue length, in vehicles, is reported by lane for each five-minute period.

These are segregated into 'light' and 'heavy' vehicles, and are then presented as a maximum queue length using the assumption that a light vehicle contributes 6m to a queue and a heavy vehicle 15m. These values can be updated by the user.

Vehicle Length Assumptions (metres)

Lights	Heavies	
6	15	

Additional Notes (Factors which may impact on survey results such as accidents, roadworks, special events)

1 Introduction

1.1 Purpose of this Transport Assessment addendum.

- 1.1.1 The following addendum sets out how the aims of the National Policy Statement for Waste Water (NPSWW) have been considered in relation to the traffic and transport impacts of the Proposed Development.

1.2 National Policy Statement for Waste Water (NPSWW) requirements

- 1.2.1 National Policy Statement for Waste Water (NPSWW) sets out Government policy for the provision of major waste water infrastructure.
- 1.2.2 Error! Reference source not found. sets out how the Transport Assessment for the Proposed Development complies with NPSWW section 4.13 (Traffic and transport impacts) requirements.

Table 1-1 – Transport Assessment NPSWW Compliance
NPSWW requirement

Paragraph 4.13.3 states that if a project is likely to have significant transport implications, the applicant's ES should include a transport assessment, using the NATA/WebTAG methodology stipulated in Department for Transport guidance, or any successor to such methodology. Applicants should consult the Highways Agency and/or the relevant highway authority, as appropriate, on the assessment and on mitigation measures. The assessment should distinguish between the construction, operation, and decommissioning project stages as appropriate.

Compliance of Transport Assessment with NPSWW requirements

- A Transport Assessment has been produced as ES Appendix 19.3 (App Doc Ref 5.4.19.3). This has been produced in accordance with the Department for Transport's Web-based Transport Analysis Guidance (WebTAG).
- The Applicant has consulted with the relevant stakeholders, including Cambridgeshire County Council (CCoC), National Highways, and Network Rail.
- The Transport Assessment assesses the construction of the Proposed Development (construction year 3, 2026), the decommissioning of the existing WWTP (construction year 5, 2028), and the operation of the Proposed Development (future operation year 1 + 5 – 2033, and future operation year 1 + 10, 2038). The methodology for the assessment years is set out in Chapter 9 section 9.2 of the Transport Assessment (App Doc Ref 5.4.19.3).

The above points demonstrate that the requirements set out in paragraph 4.13.3 of the NPSWW have been met as part of the Transport Assessment.

Paragraph 4.13.4 states that, where appropriate, the applicant should prepare a travel plan including demand management measures to mitigate transport impacts. The applicant should also provide details of proposed measures to improve access by public transport, walking and cycling,

- An Operational Workers Travel Plan can be found in Appendix 19.8 of the ES Volume 4 Chapter 19 (Document Reference 5.4.19.8).

NPSWW requirement

Compliance of Transport Assessment with NPSWW requirements

to reduce the need for parking associated with the proposal and to mitigate transport impacts.

- A Construction Workers Travel Plan can be found in Appendix 19.9 of the ES Volume 4 Chapter 19 (Document Reference 5.4.19.9).

These travel plans provide details of proposed measures to improve access by public transport, walking and cycling, and measures to minimise journeys by private vehicles. This includes future mode shift targets in either phase of the Proposed Development. Approaches to Travel Plan monitoring is also included in both Travel Plans.

The travel plans have been developed following Policy TI/2 of the South Cambs Local Plan, with particular reference to TI/2 (5) which requires travel plans to have measurable outputs and to be related to the aims and objectives contained within the Local Transport Plan.

Paragraph 4.13.5 states that if additional transport infrastructure is proposed, applicants should discuss with network providers the possibility of co-funding by Government for any third-party benefits.

Additional transport infrastructure is proposed such as the proposed site access from Junction 34 of the A14 to the proposed WWTP. This would however not require co-funding by Government.

Paragraph 4.13.8 states that where mitigation is needed, possible demand management measures must be considered and, if feasible and operationally reasonable, required, before considering requirements for the provision of new inland transport infrastructure to deal with remaining transport impacts.

- The Construction Traffic Management Plan (CTMP) (App Doc Ref 5.4.19.7) sets out demand management measures during the construction phase. This includes restrictions on construction vehicles accessing and egressing from the site during the AM peak (08:00-09:00) and PM peak (17:00-18:00) hours, and restrictions on construction vehicles travelling through

NPSWW requirement

Compliance of Transport Assessment with NPSWW requirements

Horningsea and Fen Ditton. The impacts of construction traffic on Junction 34 of the A14 during the AM and PM peak hour (08:00-09:00 and 17:00-18:00) has been assessed in Chapter 9 of the Transport Assessment (App Doc Ref 5.4.19.3).

- The outline Operational Logistics Traffic Plan (OLTP) (App Doc Ref 5.4.19.10) sets out demand management measures during the operational phase. This includes restrictions on operational vehicles accessing and egressing from the site during the AM peak (08:00-09:00) and PM peak (17:00-18:00) hours, and restrictions on operational vehicles travelling through Horningsea and Fen Ditton. The impacts of operational traffic on Junction 34 of the A14 during the AM and PM peak hour (08:00-09:00 and 17:00-18:00) has been assessed in Chapter 9 of the Transport Assessment (App Doc Ref 5.4.19.3).

The above points demonstrate how demand management measures will be implemented as part of the CTMP and OLTP, to mitigate transport impacts during the construction and operational phases of the Proposed Development.

Paragraph 4.13.9 states that the decision maker should have regard to the cost-effectiveness of demand management measures compared to new transport infrastructure, as well as the aim to secure more sustainable patterns of transport development when considering mitigation measures.

- Chapter 2, section 2.7 of the Transport Assessment (App Doc Ref 5.4.19.3) sets out mitigation measures to encourage sustainable patterns of travel, including pedestrian, cycling, equestrian, and public transport measures. It also sets out measures to minimise journeys by private vehicles.

NPSWW requirement

Compliance of Transport Assessment with NPSWW requirements

- Additional organisational initiatives and awareness raising measures to encourage construction and operational staff to travel to the Proposed Development using sustainable transport are also set out in the Construction Workers Travel Plan (Document Reference 5.4.19.9) and the Operational Workers Travel Plan (Document Reference 5.4.19.8).

The above points demonstrate how the more sustainable patterns of transport development will be secured during both the construction and operational phases of the Proposed Development.

Paragraph 4.13.10 states that, where there is likely to be substantial HGV traffic, applicants should look to:

- control numbers of HGV movements to and from the site in a specified period during its construction and possibly on the routing of such movements;
- make sufficient provision for HGV parking, either on the site or at dedicated facilities elsewhere, to avoid 'overspill' parking on public roads, prolonged queuing on approach roads and uncontrolled on-street HGV parking in normal operating conditions; and
- ensure satisfactory arrangements for reasonably foreseeable abnormal disruption, in consultation with network providers and the responsible police force.

- The Construction Traffic Management Plan (CTMP) (App Doc Ref 5.4.19.7) sets out measures to reduce the impact of HGV traffic on the surrounding transport network during construction. This includes restrictions on construction vehicles accessing the egressing from the site during the AM peak (08:00-09:00) and PM peak (17:00-18:00) hours, and restrictions on construction vehicles travelling through Horningsea and Fen Ditton. There will be sufficient provision for HGV parking on-site during the construction phase.
- The outline Operational Logistics Traffic Plan (OLTP) (App Doc Ref 5.4.19.10) sets out measures to reduce the impact of HGV traffic on the surrounding transport network during operation. This includes restrictions on operational vehicles accessing the egressing from the site during the AM peak (08:00-09:00) and PM peak

NPSWW requirement

Compliance of Transport Assessment with NPSWW requirements

(17:00-18:00) hours, and restrictions on operational vehicles travelling through Horningsea and Fen Ditton. There will be sufficient provision for HGV parking on-site during the operational phase.

The above measures will ensure that the impacts of HGV traffic on the surrounding highway network will be suitably mitigated during the construction and operational phases of the Proposed Development.
